***Abstract* - This document contains solution of sketching loci of the given equation.**

Problem
Vector-2, Example-4, Question No.-7

Question 7. Sketch the loci of the following equation

$$\frac{x^2}{4} + \frac{y^2}{9} = 1 \tag{1}$$

Solution :
Given equation is,

$$\frac{x^2}{4} + \frac{y^2}{9} = 1 \tag{2}$$

We can write equation (2) as,

$$9x^2 + 4y^2 - 36 = 0 \tag{3}$$

The general equation is given as,

$$\mathbf{x}^\top \mathbf{V} \mathbf{x} + 2\mathbf{u}^\top \mathbf{x} + f = 0 \tag{4}$$

Comparing (3) and (4) we get,

$$\mathbf{V} = \begin{pmatrix} 9 & 0 \\ 0 & 4 \end{pmatrix}, \mathbf{u} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}, f = -36 \tag{5}$$

The vertex of ellipse is given as **c** and can be obtained from,

$$\mathbf{c} = -\mathbf{V}^{-1}\mathbf{u} \tag{6}$$

We know,

$$\mathbf{V}^{-1} = \frac{1}{|\mathbf{V}|} Adj\mathbf{V} \tag{7}$$

Putting the values of $|\mathbf{V}|$ and Adj **V** we get,

$$\mathbf{V}^{-1} = \frac{1}{36}\begin{pmatrix} 4 & 0 \\ 0 & 9 \end{pmatrix}^\top = \begin{pmatrix} \frac{4}{36} & 0 \\ 0 & \frac{9}{36} \end{pmatrix} \tag{8}$$

Putting values in equation (6) we get the vertex of the ellipse,

$$\mathbf{c} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \tag{9}$$

The length of semi major axis and semi minor axis are given by,

$$\sqrt{\frac{\mathbf{u}^\top \mathbf{V}^{-1}\mathbf{u} - f}{\lambda_1}} = 3, \sqrt{\frac{\mathbf{u}^\top \mathbf{V}^{-1}\mathbf{u} - f}{\lambda_2}} = 2 \tag{10}$$

Solving equation (10) we get,

$$\lambda_1 = 4, \lambda_2 = 9 \tag{11}$$

The eccentricity of ellipse is given by,

$$e = \sqrt{1 - \frac{\lambda_1}{\lambda_2}} \tag{12}$$

Putting the values in equation 12 we get,

$$e = \frac{\sqrt{5}}{3} \tag{13}$$

The directrices of ellipse is given by,

$$c = \frac{e\mathbf{u}^\top \mathbf{n} \pm \sqrt{e^2(\mathbf{u}^\top n)^2 - \lambda_2(e^2 - 1)(||\mathbf{u}||^2 - \lambda_2 f)}}{\lambda_2 e(e^2 - 1)} \tag{14}$$

Where

$$\mathbf{n} = \sqrt{\lambda_2}\mathbf{p}_1 = \begin{pmatrix} 0 \\ 3 \end{pmatrix} \tag{15}$$

As

$$\mathbf{p}_1 = \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{16}$$

Putting the values in equation (14) we get directrices of the ellipse,

$$c = \pm\frac{27}{\sqrt{5}} \tag{17}$$

The foci of ellipse is given by,

$$\mathbf{F} = \frac{ce^2\mathbf{n} - \mathbf{u}}{\lambda_2} \tag{18}$$

Putting the respective values in equation (18) we get,

$$\mathbf{F} = \begin{pmatrix} 0 \\ \frac{\sqrt{5}}{3} \end{pmatrix} \tag{19}$$
